DETAILED ACTION

Priority

Priority to Korean Patent Application No. 2001-10775 (March 2, 2001) is claimed. Division of application No. 10/085,096 (filed March 1, 2002) now USPN 6,737,289.

Preliminary Amendment

Applicant's Preliminary Amendment of February 26, 2004 canceling claims 6-25 is acknowledged.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over United States Patent 5,907,379 (to Kim et al.) in view of United States Patent 6,678,018 B2 (to Park et al.).

As to claim 1, Kim teaches and discloses with reference to Figure 6, first (1) and second (2) substrates, a plurality of metal lines (gate lines 10 and data lines 40) on the first substrate (1) wherein the metal lines (gate lines 10 and data lines 40) are formed of a transparent conductive film at least at portions where the metal lines (gate lines 10 and data lines 40) cross one another (See Column 3, Lines 30-32, Column 4, Lines 19-20 and Column 6, Lines 28-33). Although not enumerated, there is a liquid crystal layer between the first (1) and second (2) substrates.

Application/Control Number: 10/786,109

Art Unit: 2871

Kim does not appear to explicitly specify a photo-hardening sealant between the first and the second substrates.

However, Park teaches and discloses a thin film transistor array substrate for a liquid crystal display and a method for fabricating the display (Title, entire patent).

In Park, a sealant of thermal hardening resin is printed onto a substrate in order to attach top and bottom substrates such that the substrates are spaced apart from each other with a predetermined distance (Column 6, Lines 59-63).

Park is evidence that ordinary workers in the field of liquid crystals would have found the reason, suggestion and motivation to include a photo-hardening sealant into a liquid crystal display to maintain a predetermined distance between substrates (Id.).

Therefore, it would have been obvious to one of ordinary skill in the art of liquid crystals at the time the invention was made to modify Kim in view of Park for a predetermined distance between substrates and to seal in liquid crystal material.

As to claim 2, as noted, Kim teaches gate lines (10) and data lines (40) in a display region as well as gate pads (48) and data pads (47) (Figures 4-8).

Claims 3-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over United States Patent 5,907,379 (to Kim et al.) in view of United States Patent 6,678,018 B2 (to Park et al.) and further in view of United States Patent 5,488,498 (to Fujii et al.).

As to claims 3-5, Kim does not appear to explicitly specify a plurality of pad links connecting gate lines and gate pads and data lines and data pads where at least a portion of the pad links is formed of a transparent conductive film.

Application/Control Number: 10/786,109 Page 5

Art Unit: 2871

Fujii teaches and discloses a liquid crystal display with particular contacts for supplying counter electrode potential (Title, entire patent).

In Fujii, electrode extensions extend beyond a substrate periphery (Figure 5) to uniformly drive a transparent counter electrode and to provide better display quality with high definition (Column 3, Lines 1-8).

Fujii is evidence that ordinary workers in the field of liquid crystals would have found the reason, suggestion and motivation to include pad links in order to provide better display quality with high definition (Column 3, Lines 1-8).

Therefore, it would have been obvious to one of ordinary skill in the art of liquid crystals at the time the invention was made to modify Kim in view of Fujii for better display quality with high definition.

Art Unit: 2871

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jeanne A. Di Grazio whose telephone number is (571)272-2289. The examiner can normally be reached on M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Kim can be reached on (571)272-2293. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
